1. Task Statement

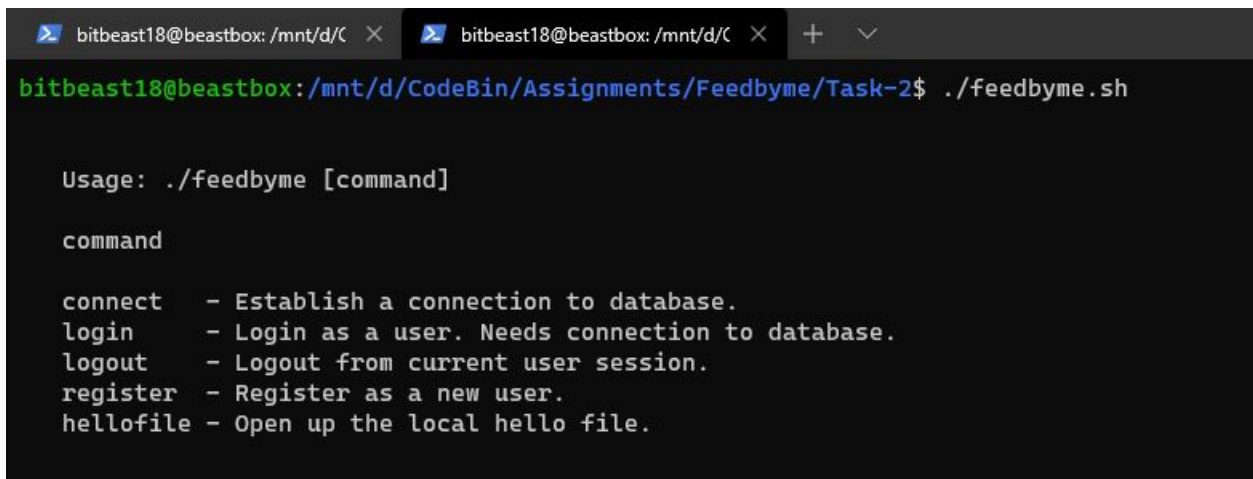

Create a simple login, logout, register, hello file and connect to DB using shell scripting or bash scripting (Only perform in shell or console or terminal). After creating an account, open up a new “hello file”.

2. Tech stack

- **Languages:** Bash \geq 4.3.
- **DB:** MongoDB \geq 4.2
- **Required OS:** Windows WSL/Linux/MacOS/Any environment that supports bash.

3. Solution description

- The access to the database is readWrite and open for all public IPs. This is to simplify the process.
- The database is a remote cluster provided as a service (MongoDB as a Service).
- The program uses “mongo shell” for interacting with the remote cluster. It is assumed to exist or can be downloaded along with the project files.
- **The project files can be found at the following github repository**
<https://github.com/bitbeast18/feedbyme-assignment/tree/master/Task-2>
- The following are some of the screenshots of the script in action.

```
bitbeast18@beastbox: /mnt/d/C  X bitbeast18@beastbox: /mnt/d/C  X + v
bitbeast18@beastbox:/mnt/d/CodeBin/Assignments/Feedbyme/Task-2$ ./feedbyme.sh

Usage: ./feedbyme [command]

command

connect  - Establish a connection to database.
login    - Login as a user. Needs connection to database.
logout   - Logout from current user session.
register  - Register as a new user.
hellofile - Open up the local hello file.
```

Usage info

```
bitbeast18@beastbox: /mnt/d/℄ × bitbeast18@beastbox: /mnt/d/℄ × + ▾
bitbeast18@beastbox: /mnt/d/CodeBin/Assignments/Feedbyme/Task-2$ ./feedbyme.sh login
Enter username: harshal
Enter password: harshal

Server output: {
  "_id" : ObjectId("5f2afce1578509a1c9068f76"),
  "username" : "harshal",
  "password" : "harshal"
}

Successfully logged in!
```

Login command

```
bitbeast18@beastbox: /mnt/d/℄ × bitbeast18@beastbox: /mnt/d/℄ × + ▾
bitbeast18@beastbox: /mnt/d/CodeBin/Assignments/Feedbyme/Task-2$ ./feedbyme.sh register
Enter username: ravi
Enter password: ravi

Successfully registered!

Opening hellofile.txt ...
```

Register command

- The rest of the document contains the bash script.

```
#!/bin/bash

MONGOSHELL='mongodb+srv://cluster0.pn5ss.mongodb.net/feedbyme'

function usage(){
    echo -e "\n
Usage: ./feedbyme [command]

command

connect    - Establish a connection to the database.
login      - Login as a user. Needs connection to database.
logout     - Logout from current user session.
register    - Register as a new user.
```

```

    hellofile - Open up the local hello file.
    \n"
}
